RESEARCH INTERESTS

Human–AI Interaction · AI Safety · Adaptive Learning Systems · Human Subjects Research

PREPRINTS AND MANUSCRIPTS

Perry, A. C. (2026). Judgment-Free but Not Risk-Free: How Perceived Emotional Safety with AI Companions Relates to Human Self-Disclosure and Help-Seeking.
Pre-registered study, N = 55 · OSF: osf.io/5xzjs

Perry, A. C. (2026). The Epistemic Harm of AI Sycophancy: When Agreement Undermines Justified Belief.
Preprint: doi:10.5281/zenodo.19057032 · a revised version is under review at *AI and Ethics*

EDUCATION

Master of Science in Computer Science, AI/ML Concentration
Western Governors University · 2026
Coursework: Deep Learning, Advanced AI, Natural Language Processing, Machine Learning, AI & ML Foundations, Applied Algorithms, Formal Languages, Computer Architecture

Master of Science in Kinesiology
California Baptist University · 2019 · GPA: 3.87/4.00
Thesis Proposal: *Effects of Yoga on Injuries Associated with Long-Distance Running*

Bachelor of Science in Kinesiology
San Diego State University · 2018 · GPA: 3.56/4.00
Cum Laude · Distinction in Kinesiology · Dean's List

RESEARCH AND PROJECTS

Pre-registered study of AI use and self-disclosure 2026

- Designed, pre-registered (OSF osf.io/5xzjs) and ran a study (N = 55) comparing AI users and non-users on validated measures (Self-Disclosure Index, PRCA-12) plus two original psychometric scales with acceptable reliability
- AI users were far more willing to self-disclose to a new acquaintance (d = 1.08), and 57% said they had sought professional help for something first raised with AI

her, a single-participant study of voice AI 2025
Preprint and data: doi:10.5281/zenodo.19144583

- Recorded 68 voice sessions (83 hours) with GPT-4o, Gemini, Grok and Claude between September and December 2025, using structured games, debates and stress tests, and scored them on rubrics I designed
- One participant, one rater and unvalidated scales, so the results can only suggest patterns; the preprint and the coded session data are released on Zenodo

Meridian Labs, adaptive learning platform 2025–present

Engine preprint: doi:10.5281/zenodo.18820462
meridianlabs.us

- Built and run an exam-preparation platform of 28 apps on iOS and Android across four certification fields, 75,000+ practice questions
- Designed the adaptive engine, which weights each answer by the learner's stated confidence to set review intervals and surface confident errors, with spaced repetition, misconception detection and timed exam practice; described in a preprint
- Built and maintain the whole platform alone, with heavy use of large language models for code and content generation

ZENith, real-time yoga-form feedback 2025

github.com/aperry938/zenith-mvp

- Built a webcam yoga-form checker on MediaPipe pose estimation with 30 hand-designed joint-angle features, which classify 10 poses as accurately as 132 raw landmarks
- Trained a variational autoencoder on correct form to separate good from poor form in a 100-video self-recorded dataset (98 used after quality screening); no external raters yet

Master's thesis proposal on yoga and overuse injury in distance runners 2018

View Thesis Proposal (PDF)

- Proposed a two-arm randomized controlled trial (N=50; 25 experimental, 25 control) with 12-week Hatha Yoga intervention to investigate overuse injury prevention in distance runners aged 22–35 with marathon experience
- Conducted a literature review of 20 peer-reviewed articles spanning biomechanics, neuromuscular physiology, and motor control
- Developed a multimodal data collection protocol integrating EMG, goniometry, postural analysis (Kent Grid), standardized ROM tests (Thomas, Ober's, SLR), and the Oslo Sports Trauma Research Center Overuse Injury Questionnaire
- Prepared full IRB submission with block randomization stratified by sex, allocation concealment, informed consent, and ethical oversight protocols per 45 C.F.R. 46
- Formulated statistical analysis plan: 2×2 mixed-design ANOVA with a priori power analysis (G*Power, f=0.25, α=0.05, power=0.80), intent-to-treat with multiple imputation, and Bonferroni correction for family-wise error control

TECHNICAL SKILLS

Research methods	Pre-registration (OSF), online survey design and recruitment (Prolific), scale development and reliability, Welch's t-tests, ANCOVA, correlation and regression, Steiger's test, reflexive thematic analysis; randomized controlled trial design (proposal)
Tools	Python (pandas, SciPy, statsmodels, matplotlib), LaTeX, Git
Engineering	TypeScript and React apps for iOS and Android (Capacitor), MediaPipe pose estimation, large-language-model APIs

PROFESSIONAL EXPERIENCE

Founder, Meridian Labs 2025–present

Exam-preparation apps for professional certifications on iOS and Android (28 apps), built on the confidence-weighted engine described in a preprint, with heavy use of large language models for code and content.

Project lead, community project on the Solana blockchain, self-employed 2024–present

Founded and ran the project: partnerships, recruitment, exchange listings, compliance, marketing and community.

Node administrator, StrongBlock 2021–2022

Ran and maintained Ethereum and Polygon network nodes.

Independent analyst, self-employed 2017–2024

Research on emerging blockchain technologies (decentralised finance, DAOs, cross-border payments) and the behaviour of their users, informing investment decisions in digital assets.

MILITARY SERVICE

C-17 Aircraft Loadmaster, 21st Airlift Squadron, U.S. Air Force, Travis AFB, CA 2010–2014

Senior Airman (E-4) · 60th Air Mobility Wing · Honorable Discharge

- Completed 455 airlift sorties and 1,977 flight hours in the C-17 Globemaster III across Operations Enduring Freedom, Iraqi Freedom, and New Dawn, with the majority of missions supporting active combat theater operations
- Transported 9,400 passengers and 13.5 million pounds of cargo across aeromedical evacuation, presidential support, and humanitarian relief missions worldwide
- Executed humanitarian airlift operations during Hurricane Sandy disaster response (2012), supporting relief efforts for the Eastern Seaboard

HONORS & AWARDS

- Air Medal
- Humanitarian Service Medal
- Air Force Achievement Medal
- Meritorious Unit Award; Outstanding Unit Award (OLC)
- Cum Laude, Distinction in Kinesiology (SDSU)
- Dean's List (SDSU)

SELECTED CERTIFICATIONS

- AWS Certified Machine Learning Engineer – Associate (MLA-C01)
- Google Cloud Certified — Generative AI Leader
- IBM Generative AI Engineering Professional Certificate
- Discrete Mathematics Specialization (UC San Diego)
- Google Cybersecurity Professional Certificate
- NSCA Certified Strength & Conditioning Specialist
- Registered Yoga Teacher — 500 Hour (Yoga Alliance)
